Situational Analysis of EU renewable energy legislation

Options for a post 2020 framework (ongoing research)
Methodology (TOWS/SWOT)

Factors influencing deployment of renewable energy:
- political and regulatory
- market and financial
- technology and infrastructure

Present External Environment
Future External Environment (2020-2030)
Renewable energy directive and current implementation thereof
Audit / literature review

External Threats and Opportunities

TOWS situational analysis/strategies

Internal Strengths and Weaknesses

<table>
<thead>
<tr>
<th>Internal/Current</th>
<th>(S) Strengths</th>
<th>(W) Weaknesses</th>
</tr>
</thead>
<tbody>
<tr>
<td>External/ Current &amp; Future</td>
<td>SO [maxi-maxi] maximise internal strengths to maximise gains from external opportunities</td>
<td>WO [mini-maxi] minimise the internal weaknesses and maximise the available external opportunities</td>
</tr>
<tr>
<td>Opportunities (O)</td>
<td>ST [maxi-mini] maximise internal current strengths, which are capable of dealing with external threats</td>
<td></td>
</tr>
<tr>
<td>Threats (T)</td>
<td></td>
<td>WT [mini-mini] diminish both the internal weaknesses and external threats</td>
</tr>
</tbody>
</table>
Factors

**Political and Regulatory factors**
- Political Commitment, regulatory stability and predictability
- Binding supranational goals and/or obligations
- Regulatory barriers for deployment of renewable energy
- Reporting, monitoring, compliance and enforcement

**Market and financial factors**
- Electricity market environment
- Costs and financing
- Macro-economic environment

**Technological & Infrastructure Factors**
- Technology learning curves
- Infrastructure robustness/interconnections
## EU Renewable Energy Legislation SWOT

<table>
<thead>
<tr>
<th>Internal Strengths</th>
<th>Internal Weaknesses</th>
</tr>

</tbody>
</table>

**OPPORTUNITIES (external)**
- Policy diffusion, alignment and momentum (O1)
- Renewables help energy savings & energy security (O2)
- Synergies with growing global market for renewable energy (O3)
- Completion of EU Internal Electricity Market & ENTSO-E network codes (O4)
- LC0E gap offsetting for some key technologies & balance of system cost-cutting (O6)
- Domestic and grid scale battery storage economically attractive between 2020-2030 (O6)
- The Enabling power of Projects of Common Interest & Juncker Investment plan (O7)

**THREATS (external)**
- Binding renewable energy targets for Member States cease to exist after 2020 (T1)
- Binding measures cease to exist after 2020 (T2)
- Growing deployment of renewable energy can lead to increased public resistance (T3)
- The self-defeating power of renewables in a marginal cost-based wholesale electricity market (T4)
- Structural low economic growth and deflation in Europe (T5)
- Member States’ protectionism through electricity infrastructure (T6)
- LC0E gap for off-shore wind energy (T7)

**(SO) Use the Force**
- NREAPs and binding measures to include (streamlin) financing provisions (S2, S3 : O6) and the use of Positive net benefits financial (PNBF) model for joint benefit calculation of projects between Member States (S3, S2 : O4, O7).
- Binding "trials" of 2030 storage, demand response and high voltage interconnections targets for Member States (S1, S2 : O4, O6, O7).
- Bring in enhanced measures to reduce regulatory & other costs not related to the renewable energy technology itself. Demand side measures requiring the integration of renewable energy in buildings and other infrastructure to bring down the balance of system cost (S3, O6).
- Binding measures to include for obligation for ENTSO-E obligation to make 10y year network development plans and network codes forward compatible with the EU’s 2030 renewable energy target. ACER tasked to verify national electricity regulations for compatibility with higher levels of renewable energy (S2, S3 : O4, O7).

**(WO) Move on and hope for the best**
- Binding targets could disappear but binding energy planning and measures are maintained. Existing planning, reporting and compliance regimes could be technically improved and streamlined (W2, W3 : O6).
- Enhanced energy efficiency regulations (e.g., through inclusion of renewable energy in building standards (W1 : O3, O5).
- Optimisation of the EU internal energy market and cross-border investments (W1, W5 : O4, O7).
- Streamlining of EU state aid rules with provisions in the renewable energy directive (W4 : O1).

**(ST) Plan against failure**
- Bottom up targets set by Member States but binding through (2020-2030) NREAPs (S2, S3 : T1).
- The NREAPs demanding higher levels of transparency and public consultation and participation (S2 : T3, T5).
- Introduction of cost containment measures, such as a fixed Internal Rate of Return (IRR) as support benchmark (S2 : T3, T5).
- NREAPs to include joint projects between Member States or other forms of cooperation. Binding measures to include removal of cross-border barriers (S2, S3, S6 : T6).
- Measures and NREAPs to address the higher LC0E of off-shore wind energy, EU R&D and infrastructure funding for Member States creating a market of cooperation in the area (S2, S3 : T7).

**(WT) Liquidation and Merger**
- EU renewable energy directive faces de facto liquidation after 2020.
- Options exist to merge important parts (e.g., binding measures) of the current directive with other EU energy legislation (e.g., EED, IEM) to salvage important strengths of the current framework.
- However, not certain to what extent this is possible and hence important parts of the renewable energy directive could still disappear. (T1, T2 : W1, W2).
Options exist to enhance EU Renewables deployment, even in absence of (top-down) binding national 2030 targets.

Some scenarios are best avoided (e.g. liquidation and merger)

Enhancement of EU RE comes from improving existing directive (e.g. measures)…

but also better alignment, streamlining and synergies with other parts of EU (energy) law (e.g. IEM, EED, State Aid, …)
Example:
Blueprint post 2020 policy framework (work in progress)

Streamline/Merge

RED

EED

Synergies

IEM

- Enhanced/streamlined planning and reporting (NREAPs, NEEAPs)
- Enhanced monitoring/compliance regime
- Demand side measures
- Bundled demand response, interconnection and storage target
- Cost containment in support measures

- ENTSO-E 10y grid investment plans consistent with 27% 2030
- Network codes supporting RE deployment
- Enhanced role for ACER: monitoring national regulation and investments esp. blocking of RE across borders

Alignment

State Aid Guidelines
